Cindi,

When I say official authorization I really mean a letter stating specifically which outfalls the permittee is allowed to discharge. Attached is a 2003 notification, which is typical for most files, indicating receipt of the application and extension until a revised permit is issued. Post issuance in 2007, I can't find an authorization letter in any of the "green two-part GP folders" that declare outfalls per the applications. However, the more recent authorizations for Furie and Buccaneer have these letters. Am I missing something? Was there something happening legally for the 2007 issuance that resulted in extension of previous authorizations, missing information, or other? I'm confused as to why there is no paper trail in file. Note also that our files only go back to 2002.

I am not sure what you mean by official authorizations. We should have authorized facilities under each of the permit iterations so there should be letters to the platforms and shore-based facilities saying that the 2007 Permit was final and they would be covered by it.

Is that what you mean or am I off base? I am heading to the Donlin Agency meeting for the rest of the day but will be available tomorrow or Friday to talk more about this. If I have phone service at the Campbell Tract, I will be checking e-mail at some time during the meeting.

Cindi,

By your recollection, when were the last official authorizations for historic Cook Inlet facilities. The files we have from EPA only go back to around 2003 and I cannot find any? Was it 1999?
